

TRICKY RECTANGLE

U S E R M A N U A L

HOW TO PLAY

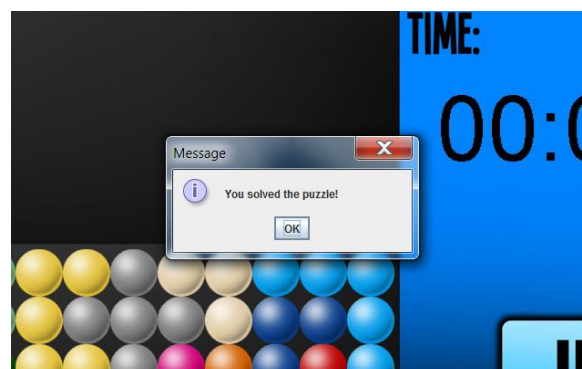

Tricky Rectangle consists for twelve coloured polyonimo pieces, each made of 3 to 5 dots. When you start a new name, you will see some of the pieces already fixed on the board, as shown below. You cannot move these pieces. Your job is to arrange the remaining free moving pieces on the board so that every spot is filled.

Press the blue play button to start the timer. Now you will be able to move the pieces.

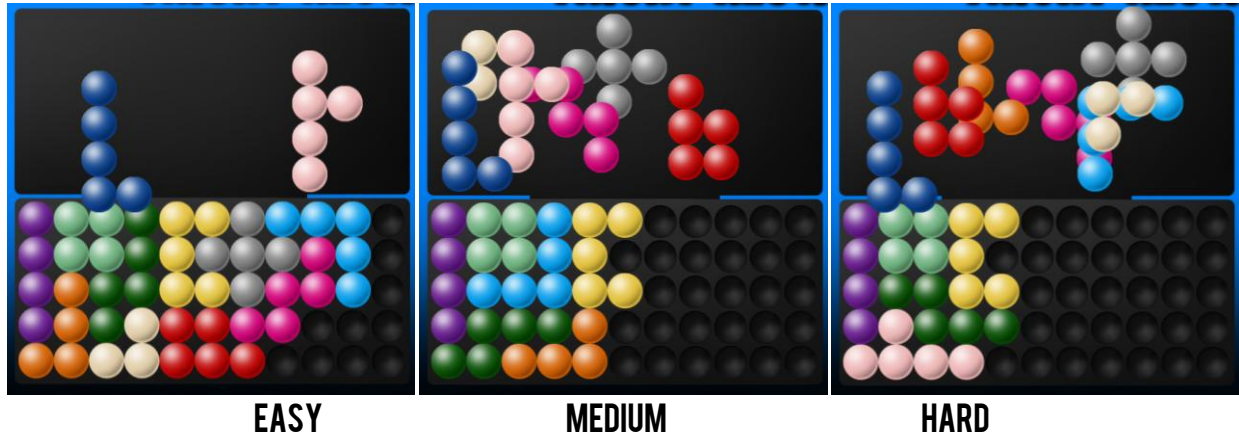

To **rotate**, click and hold a piece, and press the left and right arrow keys to rotate counterclockwise and clockwise. To **flip**, click and hold a piece, and press the up and down arrow keys. To **place** a piece on the board, simply click on it and drag it into the board. If it can fit, the piece will snap in place on the board.

Once you've solved the puzzle, you will see the following screen. You will then be given the option to enter your name, and if your time was fast enough, you will be listed on the high scores list!

ADDITIONAL FEATURES

Tricky Rectangle features three levels of difficulty – easy, medium, and hard. Each one has less pieces fixed on the board, making it slightly more challenging to solve. The game starts on the 'easy' level by default, but to change this, simply go to Game >> Difficulty Level

If you are unable to solve a puzzle, don't worry! The computer will solve it for you. Go to Game >> Solve, and the board will be solved automatically.
